

New format: Inhouse Farming – Feed & Food Convention 2025

International conference for new approaches in agriculture and nutrition – Biennial rhythm – With foyer exhibition – Premiere on 29 and 30 April 2025 in Hamburg

DLG (German Agricultural Society) is extending its 'Inhouse Farming – Feed & Food' brand portfolio with a new format: the 'Inhouse Farming – Feed & Food Convention'. The international conference with foyer exhibition will be celebrating its premiere on 29 and 30 April 2025 at the Congress Center Hamburg. Alternating every other year with the international 'Inhouse Farming – Feed & Food Show', which takes place together with EuroTier, the world's leading trade fair for animal farming, the new format will offer experts from the agricultural and food sectors as well as research and science a platform for innovations, intensive professional dialogue, discussions and networking. The 'Inhouse Farming – Feed & Food Convention' will foster continuous knowledge exchange along the entire value chain and therefore ensure that innovative solutions for transformation in the agricultural and food sectors are evolved together. Market-ready solutions will be presented and demonstrated hands-on by industry partners in the foyer exhibition.

Securing the global food supply through new agricultural production systems is one of the central future tasks with which the 'Inhouse Farming – Feed & Food Convention' will be dealing intensively from various perspectives of the value chain as of next year. Intelligent strategies for sustainable, technology-based food production are required in the light of climate change, resource and production efficiency and progressive digitalisation. In this context, embedding the production of high-quality food under controlled conditions plays a central role within diverse food value chains.

"A dynamic value chain that cooperates closely and in a spirit of trust is crucial for the successful transformation of our food systems. This is why it is also the focus of our new

international conference, which is aimed at helping to ensure the emergence of new synergies and cooperations and therefore new business prospects", says Marcus Vagt, Head of DLG's Energy, Inhouse Farming and New Foods Department. At the two-day conference with foyer exhibition, both traditional actors and start-ups from the agribusiness as well as the food processing and trading sectors will have the opportunity to present their innovative products, to be inspired by practical presentations themselves and to network. The aim is to jointly seek solutions that enable resource-efficient food production in an increasingly value-oriented society. As a leading international expert network within the agricultural and food sectors, DLG is predestined for offering the value chain an international platform for professional dialogue that paves the way for pioneering developments at the 'Inhouse Farming – Feed & Food Convention'.

Focal topics

Well-known experts from the fields of science and business will take an intensive and practical look at future topics. Amongst others, these topics will include CEA - controlled environment agriculture, vertical farming, alternative proteins, insect production, aquaculture & algae, aquaponics, cellular farming and high-value crops, including stimulant cannabis.

Foyer exhibition

The accompanying foyer exhibition will offer innovative companies, start-ups and research institutions an ideal opportunity to present and discuss their pioneering technologies, products or services to and with visionaries and decision-makers from the agrifood industry.

Location of Hamburg

The metropolitan region of Hamburg is one of the most competitive locations in Germany and offers a highly innovative business ecosystem in the field of nutritional sciences – from universities and research institutions to global companies and agrifood start-ups. In combination with its easily accessible location, well-developed infrastructure and business-friendly culture, this makes the world-famous port city an ideal location for the new DLG format – the Inhouse Farming – Feed & Food Convention.

Inhouse Farming – Feed & Food

'Inhouse Farming – Feed & Food' is DLG's (German Agricultural Society) B2B platform for the agricultural and food systems of the future. Closely networked with hands-on farming, it offers professional information, perspectives,

innovations and business – from feed to food. This year, the 'Inhouse Farming – Feed & Food Show' will be part of EuroTier, the world's leading trade fair for livestock farming equipment. It will be taking place in parallel from 12 to 15 November 2024 in Hanover. The 'Inhouse Farming - Feed & Food Convention' is a new format that will be taking place every two years, alternating with the 'Inhouse Farming – Feed & Food Show' from 2025. The international professional conference will intensify knowledge exchange within the value chain in order to jointly drive the transformation of the agricultural and food sectors forwards and help to shape it.

DLG. Progress and sustainability in the agricultural sector and the food industry

Founded in 1885 by the German engineer Max Eyth, DLG (Deutsche Landwirtschafts-Gesellschaft – German Agricultural Society) stands for productivity and resource protection in a sustainable and innovative agricultural and food value chain. DLG's mission is to promote progress through the transfer of knowledge, quality standards and technology. DLG has over 31,000 members, and is non-profit, politically independent and internationally networked. As one of the leading organisations in its sector, DLG organises trade fairs and events in the fields of agriculture and food technology and tests food, agricultural machinery and farm inputs. With its Competence Centers for Agriculture and Food and the DLG-Verlag's media, DLG stands for the independent transfer of know-how. DLG additionally develops solutions to the challenges of the agricultural, agribusiness and food sectors in numerous national and international expert committees.
