## AN EXTENDED EUROPEAN NETWORK OF COORDINATED OBSERVATORIES FOR AGROBIODIVERSITY MONITORING

Identifying Agrobiodiversity  
Monitoring Institutions

One of the aims of the Horizon Europe Project BioMonitor4CAP is to **locate and identify relevant observatories, institutions and networks that collect data and indicators on agrobiodiversity**. By centralizing these data, the aim is to facilitate access to this valuable information.

### MONITORING

The BioMonitor4CAP project will design simple and advanced biodiversity monitoring systems to measure biodiversity in the fields.

### INDICATOR SYSTEMS

Therefore it will combine classical biodiversity indicator systems with new technological approaches.

### SUSTAINABILITY

The main goal is to provide knowledge, methods and tools to farmers and the interested public for boosting the transformation of agricultural systems.

## Join the BioMonitor4CAP agrobiodiversity network

Do you identify or know institutions that collect data on European agrobiodiversity ?

You can join by contacting the BioMonitor4CAP project team at the following email address:

[biomonitor4cap@irwirpan.waw.pl](mailto:biomonitor4cap@irwirpan.waw.pl)

## BENEFITS FOR JOINING INSTITUTIONS IN THE EUROPEAN BIODIVERSITY NETWORK

- The opportunity to be listed for free on an international platform, significantly increasing your company's visibility;
- Enhanced networking opportunities and collaboration with similar institutions;
- Free access to tools that improve visibility and networking activities.

By joining BioMonitor4CAP, you become part of an ambitious European project, where your institution can contribute to the EU's transition towards more sustainable agricultural systems.
